

# Asbatech CRM — Attendance Testing Workflow

Document: Complete Employee & Admin step-by-step guide for QA  
Product: Asbatech CRM · Module: Time & Attendance  
Timezone default: Asia/Karachi · Weekend off: Saturday & Sunday  
Generated: June 12, 2026

### Purpose

Use this document to test every attendance feature end-to-end. Each section lists steps, expected results, and what the admin should see.

## 1. Before you start (setup)

| Item                 | Detail                                                                                                                                                |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| URLs                 | Staff login: /login · Employee attendance: /attendance · Admin dashboard: /dashboard · Attendance report: /attendance/report                          |
| Default admin (seed) | admin@crm.com / admin123                                                                                                                              |
| Employee account     | Create via Employees → Invite employee, or use existing employee login                                                                                |
| Desktop agent        | One-time install per laptop (PowerShell Admin). Required for reliable clock-in verification                                                           |
| Clear test data      | Attendance only: SQL in README or delete break/attendance rows · Full reset: <code>npm run db:clear</code> then <code>npm run db:seed</code>          |
| Dev test mode        | In development, late / early-leave / absence popups may appear <b>same day</b> (yellow banner on Attendance). Production uses <b>next working day</b> |

## 2. Employee — daily workflow (happy path)

- 1 Log in at /login with employee credentials.
- 2 Open sidebar → **Attendance** (employees only; admins use Dashboard).
- 3 **Install / verify agent** (first time or if status not Running):
  - 3 Click **Install Agent** → copy PowerShell command → run as Administrator → enter CRM password.
  - 3 Click **Verify Agent** → badge should show **Running**.
- 4 **Clock in** (Mon–Fri only; weekend blocked):
  - 4 Click **Clock in**.
  - 4 Expected: Live status = **Active (working)**; Clock in time recorded; work timer starts.
  - 4 If late (after grace): late minutes stored; explanation popup rules apply (see §5).
- 5 **Start break** (once per day):

- **5** Click **Start break** → popup: choose type (Lunch, Prayer, Tea/coffee, Personal, Other) + optional note.
- **5** Expected: Status = **Break**; Start break disabled; End break enabled.

#### **6 End break:**

- **6** Click **End break** → popup: describe where you went / what you did (required, min 3 chars).
- **6** Expected: Status = **Active**; break minutes added to Today's summary; admin gets notification with times + reason.

#### **7 Clock out** at end of shift:

- **7** Click **Clock out**.
- **7** Expected: Shift closed; work hours finalized; if early leave → explanation rules apply (see §5).

#### **8 Review Today's summary** (clock in/out, work hours, break minutes) and **Breaks** table at bottom.

## 3. Employee — feature details

### 3.1 Clock in / clock out

| Rule                  | Behavior                                                                        |
|-----------------------|---------------------------------------------------------------------------------|
| Weekend               | Saturday & Sunday: no clock-in, no breaks; banner "Weekend off"                 |
| Pending explanations  | Cannot clock in until pending late, early-leave, or absence reason is submitted |
| Second shift same day | After clock out, Clock in again starts a new shift (same calendar day)          |
| Agent                 | Clock in blocked in UI if agent not installed; verify agent first               |

### 3.2 Break (Start / End buttons)

| Step        | Employee action                            | Expected                                                           |
|-------------|--------------------------------------------|--------------------------------------------------------------------|
| Start       | Modal: break type + note                   | Status Break; only 1 manual break/day                              |
| End         | Modal: return note required                | Back to Active; admin notification with start/end/duration/reasons |
| Break types | Lunch, Prayer, Tea/coffee, Personal, Other | Other requires note at start (3+ chars)                            |

### 3.3 Away monitoring (Attendance page open)

| Event                | Threshold            | Employee sees                  | Admin sees                  |
|----------------------|----------------------|--------------------------------|-----------------------------|
| Close Attendance tab | ~10 sec              | Notice when tab reopened       | Tab-close alert + away time |
| Other browser tabs   | —                    | Allowed (Gmail, YouTube, etc.) | Not reported as tab close   |
| Cursor idle          | Disabled in policy   | Not active currently           | —                           |
| Laptop sleep / lock  | ~10 sec (with agent) | Sleep notice when awake        | Away alert if agent running |

### 3.4 Per-employee check-in time & grace

| Setting           | Source                                    | Example                                           |
|-------------------|-------------------------------------------|---------------------------------------------------|
| Expected check-in | Admin sets per employee OR office default | Employee 7:00 AM, office 9:00 AM                  |
| Late grace        | Office setting (default 15 min)           | 7:00 + 15 min grace → 7:15 OK; 7:16 = 16 min late |
| Shift end         | Office setting                            | Used for early-leave calculation                  |

## 4. Employee — explanation popups (late / early leave / absence)

### Popup timing

**Production:** popup on the **next working day** (weekends skipped).

**Development:** popup can appear **same day** (yellow "Test mode" banner).

**Rule:** Popup cannot be dismissed without submitting reason → clock-in blocked until done.

### 4.1 Late arrival

- 1 Clock in after expected time + grace (e.g. 7:16 with 7:00 start and 15 min grace).
- 2 On next working day, open Attendance → **Late arrival explanation** modal appears.
- 3 Submit reason (min 3 chars) → popup closes → clock-in allowed.
- 4 Skip reason → popup stays → clock-in blocked.

**Example:** Friday late → popup Monday (not Saturday/Sunday).

### 4.2 Early leave

- 1 Clock out before shift end time.
- 2 Next working day → **Early leave explanation** modal.
- 3 Submit reason → clock-in allowed. No grace on early leave.

### 4.3 Absence (did not come)

- 1 Employee absent on a working day (no clock-in record).
- 2 Next working day when they open Attendance → **Absence explanation** modal for that date.
- 3 Submit reason → clock-in allowed. Admin sees reason in Absence column + notification.

**Example:** Monday present, Tuesday absent, Wednesday return → Wednesday popup for Tuesday.

### 4.4 Absent day (no popup same day)

Absence does **not** trigger a popup on the absent day itself. Admin report shows **Absent** for that date.

## 5. Admin — navigation & roles

| Role     | Attendance menu                   | Main screens                                    |
|----------|-----------------------------------|-------------------------------------------------|
| Employee | Attendance only                   | /attendance — clock in, breaks, own summary     |
| Manager  | Attendance report                 | /dashboard, /attendance/report — team view      |
| Admin    | Attendance report + Admin Control | /dashboard, /attendance/report, /admin/overview |

## 6. Admin — daily workflow

- 1 Log in as admin → open **Executive Dashboard** (/dashboard).

- 2 Review **Agent health** table: employee name, check-in time, agent state, late, early leave, absence, last seen, shift status.
- 3 Click **Late** / **Early leave** / **Absence** badges to view employee reasons and times.
- 4 Click a row → **Employee attendance detail** panel (timeline, breaks, export).
- 5 Edit employee **Check-in time** via Edit button in table (per-employee schedule modal).
- 6 Open **Admin Control** or dashboard office section → set **Office hours** (expected check-in, shift end, late grace minutes).
- 7 Check **Notifications** for: away alerts, tab close, break ended (type, times, reasons), absence explanations.
- 8 Open **Attendance report** (/attendance/report) for date filters, daily/range reports, exports.

## 7. Admin — what to verify per feature

| Feature           | Where admin sees it                          | Expected data                                                   |
|-------------------|----------------------------------------------|-----------------------------------------------------------------|
| Live attendance   | Dashboard agent table                        | Active / Break / Inactive / Offline, open/closed shift          |
| Late              | Late column + modal                          | Minutes late, expected time, clock-in time, reason or "Pending" |
| Early leave       | Early leave column + modal                   | Minutes early, shift end, clock-out, reason                     |
| Absence           | Absence column                               | "reason pending" or "View reason" with submitted text           |
| Break             | Notifications + employee detail breaks table | Type, start note, end note, start/end time, duration            |
| Away / tab close  | Notifications + Reason column                | Auto away messages, sleep, tab close                            |
| Agent health      | Agent state column                           | Running / Installed / Stale / Not installed                     |
| Office settings   | Admin Control / dashboard                    | Default check-in, shift end, grace minutes                      |
| Per-employee time | Check-in time column + Edit                  | Override or "(office)" default                                  |
| Reports           | /attendance/report                           | Present / absent / working counts; export                       |

## 8. QA test checklists

### 8.1 Employee — must pass

| #  | Test                 | Steps                                     | Pass criteria                              |
|----|----------------------|-------------------------------------------|--------------------------------------------|
| 1  | Agent + clock in     | Verify agent → Clock in                   | Active; clock-in time shown                |
| 2  | Break flow           | Start break (Lunch) → End break with note | Break minutes increase; admin notification |
| 3  | Clock out            | Clock out after work                      | Shift closed; work hours shown             |
| 4  | Weekend block        | Open Attendance on Saturday               | No clock-in; weekend banner                |
| 5  | Late popup           | Clock in late → next day open Attendance  | Modal blocks until reason submitted        |
| 6  | Early leave popup    | Clock out early → next day                | Modal + block until reason                 |
| 7  | Absence popup        | Skip one working day → return next day    | Absence modal for missed day               |
| 8  | Tab close            | Close Attendance tab 10+ sec → reopen     | Return notice; admin alert                 |
| 9  | Calendar history     | Pick past date in calendar                | Summary + breaks for that day              |
| 10 | Second break blocked | Try Start break twice same day            | Error: break already used                  |

### 8.2 Admin — must pass

| # | Test                       | Pass criteria                                 |
|---|----------------------------|-----------------------------------------------|
| 1 | Dashboard loads agent rows | All employees listed with live status         |
| 2 | Late detail modal          | Shows minutes, times, reason status           |
| 3 | Absence column             | Pending or submitted reason visible           |
| 4 | Edit check-in time         | Save → employee uses new expected time        |
| 5 | Office grace change        | 15→20 min → late calc uses new grace          |
| 6 | Break notification         | After employee ends break: type, times, notes |
| 7 | Employee detail panel      | Break list shows type + start/return notes    |
| 8 | Attendance report          | Filter by date; absent days counted           |
| 9 | Re-issue install           | Admin can trigger agent setup for employee    |

### 8.3 Edge cases

- **Friday late → Monday:** No popup Sat/Sun; popup Monday.
- **Friday absent → Monday:** Absence popup Monday for Friday.
- **Pending late + try clock in:** Blocked until reason submitted.

- **On time clock-in:** No late popup.
- **Within grace:** e.g. 7:14 for 7:00 + 15 grace = not late.
- **Logout / login:** Session + attendance state persist for the day.

## 9. Quick reference — status labels

| Employee live status | Meaning                                                |
|----------------------|--------------------------------------------------------|
| Active (working)     | Clocked in, not on break                               |
| Break                | Manual break in progress                               |
| Inactive             | Unscheduled away (idle/sleep/tab) — open break session |
| Offline              | Not clocked in or already clocked out                  |
